This document contains box plots comparing different protease and peptidase activity levels. The plots are labeled as follows:

- **A (real data)**
- **B (synthetic data with std = 0.1)**
- **C (synthetic data with std = 0.01)**
- **D (synthetic data with std = 0.001)**

The box plots represent activity levels for various proteases and peptidases including cathepsin E, cathepsin D, calpain 2, membrane type matrix metallopeptidase 6, cathepsin L, elastase 2, trypsin 1, membrane type matrix metallopeptidase 1, calpain 1, and neprilysin.
